SportsMan SQL Newsletter

October 2008

Reasons to Upgrade to SportsMan SQL

Our new SportsMan SQL Parks & Recreation Management Solution has been developed from the ground up with stability and enhanced functionality in mind. This revolutionary new version is built on one of the best database engines in the software industry.

New Features Include:

Custom Registration Questions	Improved Stability
Customized Reports	Simplified Menus
Improved Financial Reporting	Wait Lists
Better Cash Till Management	Email Reports/Participants
Internet Shopping Cart	Age Verification

And much more! Discover what so many of our customers already have by upgrading to the new SportsMan SQL.

Upgrade Pricing Changes

Upgrading from our legacy version of SportsMan to SportsMan SQL is in the best interest of your operation and your customers. Because of our staff resources required to convert to the new system it has become necessary to increase the fee for upgrading to the new product. However, our commitment to our existing customers is still reflected by a significantly lower price than a new installation. Effective January 1st, 2009, the new pricing will be as follows:

Core: $1500
Internet Module: $600
Point of Sale Module: $800
Membership Module: $1500

If you act now and complete your upgrade to SportsMan SQL prior to January 1st, 2009, the current pricing will apply. Call Peak Software today!

Come See Us at the NRPA Conference

We will be at the National Recreation and Parks Association Conference in Baltimore on October 15th – 17th. Come visit us in booth 1345!

Peak Welcomes New Employees

Please welcome Curtis and Shanna to the Peak Sofware team! Curtis joins Rich, Kelly and George in Technical Support. Shanna is our new Office Administrator and Receptionist. Both have an extensive background in customer support and service and are excited to join us in serving your needs.

Avoiding Disaster with OnGuard

Have you considered the consequences of losing important customer data because of hardware failure or other unforeseen catastrophes?

All of Peak Software's products have a built in feature called OnGuard backup that will regularly send a copy of your data to our secure off-site server for safe keeping.

Many of our customers have access to great IT or IS personnel who are aware of the necessity to backup your important customer data, but may not be aware of your SportsMan installation or how it works and how to back it up properly. In other cases, full backups of systems are made that may take several hours to restore.

With OnGuard, your facility can be back up and running in less than an hour after a complete system failure. Additionally, Peak Software monitors the status of your off-site backups ensuring that the files are viable, and if a backup fails three times in a row an issue is opened with our Tech Support team which we will then resolve by contacting you to troubleshoot.

Ask us more about OnGaurd and how this affordable service can help protect you from disaster.
