## SportsMan SQL, PCI Compliance, and Credit Card Security

Peak has always been a leader in the recreation and parks software industry. Over the years, Peak has worked very hard to provide secure credit card processing for both in-house and online credit card transactions without any outside sources issuing specific guidelines and standards. Although credit card security has not been an issue for Peak or our customers, in the past few years, the major credit card companies have formed the Payment Card Industry (PCI) security standards council. The PCI council has mandated best practices regarding credit card number storage and securing sensitive information. Peak understands that most of our customers do not have the resources to become PCI compliant on their own, so we have devoted many hours of development and testing to SportsMan SQL because we are your partner in technology. Whether it's the bank, merchant processor, board, mayor, auditors, or IT staff asking if your organization is PCI compliant, you may answer to them that SportsMan SQL offers a PCI compliant mode and your organization can process credit cards knowing that the stringent PCI guidelines and standards have been met. Also, the SportsMan SQL PCI mode is included in the annual customer care plan, so there will be no additional fees!

If you are interested in enabling the PCI mode in SportsMan SQL, please contact us and we would be happy to review any questions, details and options, as well as guide you through the procedure.

SportsMan SQL System Configuration with PCI mode option

Peak Launches a New Website

Peak will be launching a new SportsMan SQL website in the first part of 2012. The site will be freshened up with a new look and easier navigation. Initially the site will launch with all the marketing information regarding SportsMan SQL: pricing, testimonials and more. But we aren't leaving our customers out in the cold. Peak will also be adding a customer login area where you will be able to access SportsMan SQL documentation, manuals, and training/support videos. The new site represents our continued effort to provide excellent customer service and multiple channels of communication and information dissemination.

Peak Releases SportsMan SQL Golf Module

In case you missed last month's newsletter, Peak added a Golf module to the SportsMan SQL resume. The new add-on module, which integrates seamlessly into SportsMan SQL, will manage golf courses with ease. Some of the highlights include:

- Tee Sheets
- Golf Cart & Equipment Sales
- Pro Shop Management with Inventory Controls
- Online Tee-Time Reservations
- Membership Management

If you like SportsMan SQL, you'll love how it works at your golf course too—of course, with pricing that's consistent with our commitment to value.

Call us to schedule a demo.
